# THE **LINUX** FOUNDATION

The Linux Foundation and the projects we support form the most ambitious and successful investment in the creation of shared technology

zowe.org

## Announcements

Zowe 1.27.2 is now available. You can download the installers and PTFs (UO02000 UO02020) for this release from the [Download](#) page. To learn what's new in this release, see the [Release notes](#).

Mark your calendars - the next weekly series of Zowe v2 Office Hours begins Wed Apr 6th 12:00pm EST [Learn More](#)

Zowe is NOT affected by the recently published log4j vulnerability. For more information, click [Learn More](#)

# Open, Simple, Familiar

Combining the past and the present to build the future of mainframe

Zowe is an integrated and extensible open source framework for z/OS. Zowe, like Mac OS or Windows, comes with a set of APIs and OS capabilities that applications build on and also includes some applications out of the box.

Zowe offers modern interfaces to interact with z/OS and allows you to work with z/OS in a way that is similar to what you experience on cloud platforms today. You can use these interfaces as delivered or through plug-ins and extensions that are created by clients or third-party vendors.

Zowe is composed of several components, each improving the learning ability, accessibility, and possibility of mainframe development.

[Zowe Application Framework](#)

[Download Slides \(.pptx\)](#) | [Download Transcript \(.txt\)](#)

<https://mainframeupdate.blogspot.com/2022/01/the-arcati-mainframe-yearbook-2022-user.html>

Zowe, the open-source way of accessing mainframes, was introduced in 2018. 19 percent of sites said that they are already using this open-source technology, with a massive 50 percent of sites having plans to make use of it in the coming year. Open-source technology is now becoming commonplace on mainframes.

Joe\$ zowe

### DESCRIPTION

Welcome to Zowe CLI!

Zowe CLI is a command line interface (CLI) that provides a simple and streamlined way to interact with IBM z/OS.

For additional Zowe CLI documentation, visit <https://docs.zowe.org>

For Zowe CLI support, visit <https://www.zowe.org>

### USAGE

zowe <group>

Where <group> is one of the following:

```

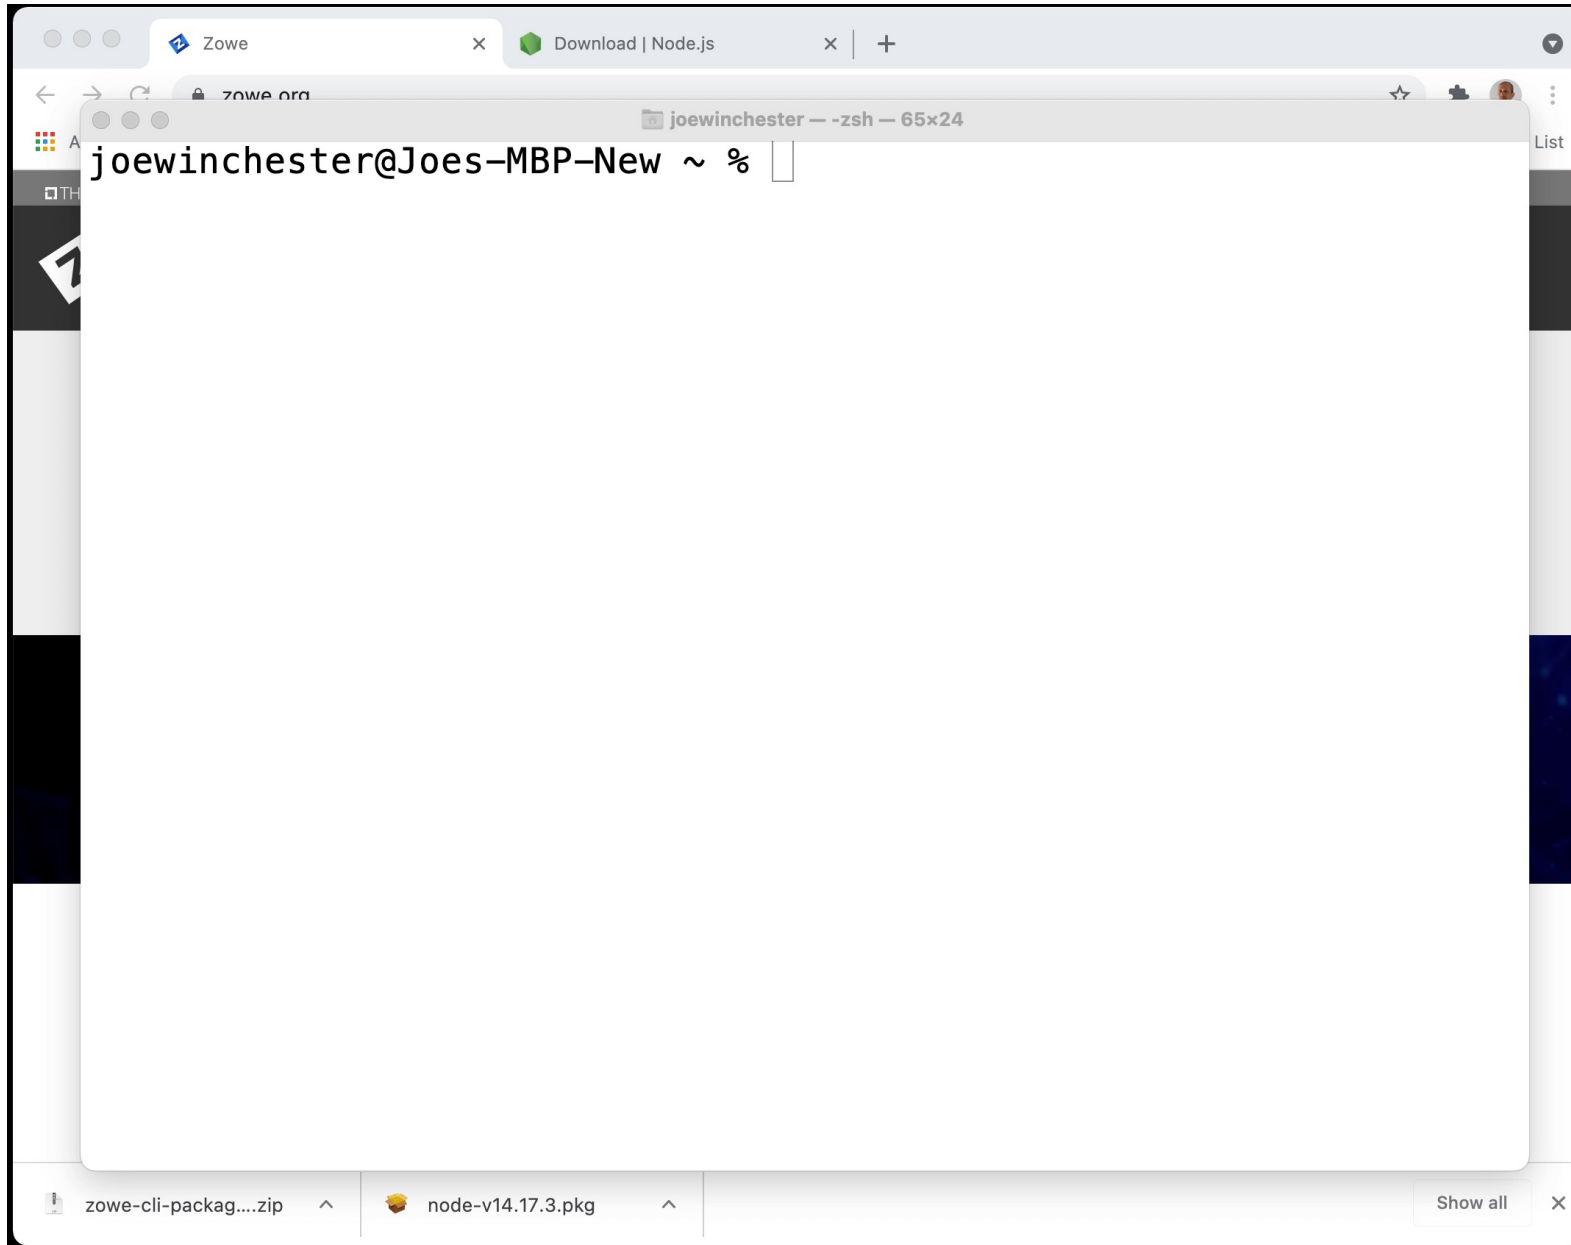

=====
This program demonstrates the following Language
Environment callable
services : CEEOUT, CEELECT, CEEDATE
=====
I D D I V I S I O N
=====
Identification Division.
Program-Id:  AMIDPP.
=====
D A T A  D I V I S I O N
=====
Data Division.
Working-Storage Section.
=====
Declarations for the local date/time service.
01  Feedback.
    copy CEEIOCT
02  fb-severity PIC 9(4) Binary.
02  fb-detail  PIC X(8).
77  fb-output  PIC S9(9) Binary.
77  Lfdate    PIC S9(9) Binary.
77  Lfsecs    COMP-2.
77  Greg      PIC X(17).
=====
Declarations for messages and pattern for date formatting.
01  Pattern.
    PIC 9(4) Binary Value 45.
    PIC X(45) Value
    "Today is %wwwwwwwww, %mmmmmm ZD, YYYY.".
77  Start-Msg PIC X(88) Value
    "Callable Service example starting.".
37
77  Ending-Msg PIC X(88) Value
    "Callable Service example ending.".

Zowe Explorer is a sub-project of Zowe, focusing on modernizing mainframe experience. Zowe is a project hosted by the Open Mainframe Project, a Linux Foundation project.

The Zowe Explorer extension modernizes the way developers and system administrators interact with z/OS mainframes by:

- Enabling you to create, modify, rename, copy, and upload data sets directly to a z/OS mainframe.
- Enabling you to create, modify, rename, and upload USS files directly to a z/OS mainframe.
- Providing a more streamlined way to access data sets, uss files, and jobs.

## Zowe and Zowe CLI

{Core} The Open Mainframe Project's Zowe is an open source project for the IBM Z platform. It provides new user interfaces for users to interact with z/OS. It also provides a set of APIs on which users can easily build their applications on z/OS. Zowe's modern interface allows you to use z/OS to develop and extend your applications in a way similar to what you experience on a cloud platform today. It not only lowered the learning curve of IBM mainframe and made IBM z/OS easy to work with, but also is the product of IBM mainframe embracing open source and entering the cloud era.

Zowe CLI is an important part of Zowe. It is a command-line interface that you can use on any platform (Windows, MacOS, Linux). It is easy to integrate with common development build tools such as integrated

First, you can list dataset with "list data-set" command:

```
$ zowe zos-ftp list data-set "SYS1.**.*EXEC"  
SYS1.SAXREXEC  
SYS1.SBPXEXEC
```

Then, you can view the dataset contents with "view data-set" command, as you do from ISPF. Reminder: Only text data is supported to view.

```
$ zowe zos-ftp view data-set "TNZSYS.ZFTP.TEST(HELLO)"  
//HELLO JOB ,NOTIFY=&SYSUID,CLASS=A,MSGCLASS=H,MSGLEVEL=1  
//STEP0001 EXEC PGM=IEBGENER  
//SYSIN DD DUMMY  
//SYSPRINT DD SYSOUT=*  
//SYSUT1 DD *  
Hello World  
/*  
//SYSUT2 DD SYSOUT=*
```

You can also download the text dataset to the local machine with "download data-set" command:

```
$ zowe zos-ftp download data-set "TNZSYS.ZFTP.TEST(HELLO)"  
Data set downloaded successfully.  
Destination: tnzsys/zftp/test/hello
```

## z/OS FTP Plug-in for Zowe™ CLI

The z/OS FTP Plug-in for Zowe™ CLI lets you access z/OS datasets, USS files, and submit JCL, leveraging the z/OS FTP service. The plug-in lets you perform these z/OS operations through the Zowe CLI client without the use of IBM z/OSMF on the back end (such as situations where z/OSMF is down).

### How the plug-in works

This plug-in uses the **zos-node-accessor package**, intending to be as close as possible to the corresponding commands in core Zowe CLI in terms of syntax and response. However, there may be times where they differ slightly due to technical details of the zos-node-accessor package.

You can use the plug-in to perform various tasks, such as the following:

- List, view, rename, or download z/OS dataset, partitioned dataset members or USS file.
- Upload local file or stdin to z/OS dataset or USS file.

**Install**

```
> npm i @zowe/zos-ftp-for-zowe-cli
```

## IBM RSE API Plug-in for Zowe CLI

IBM RSE API Plug-in for Zowe CLI extends Zowe CLI to let you interact with z/OS resources. The RSE plug-in interacts with z/OS by using IBM Remote System Explorer API (RSE API) instead of using z/OSMF. This solution is a great alternative if you have already used the Remote System Explorer with other IBM offerings such as IBM Developer for z/OS or IBM Explorer for z/OS. It is also a good option if you have not configured z/OSMF on your z/OS.

The RSE API support provided with the RSE API Zowe CLI plugin and IBM Z Open Editor not only allows you to execute Zowe CLI command line operations, but to also use the protocol with the Zowe Explorer VS Code extension to graphically navigate and access file and job resources. You can also mix and match z/OSMF and RSE CLI API profiles and use CLI commands and Zowe Explorer views with the different profiles at the same time. For example, you can access one LPAR with z/OSMF and another with RSE API from within the same VS Code workspace using Zowe Explorer and IBM Z Open Editor. Z Open Editor capabilities such as COBOL Copybook or PL/I Include file resolving can be utilized with either of the two protocols as well.

### Install

```
> npm i @ibm/rse-api-for-zowe-cli

# Filtering and Formatting

## Response Format Options

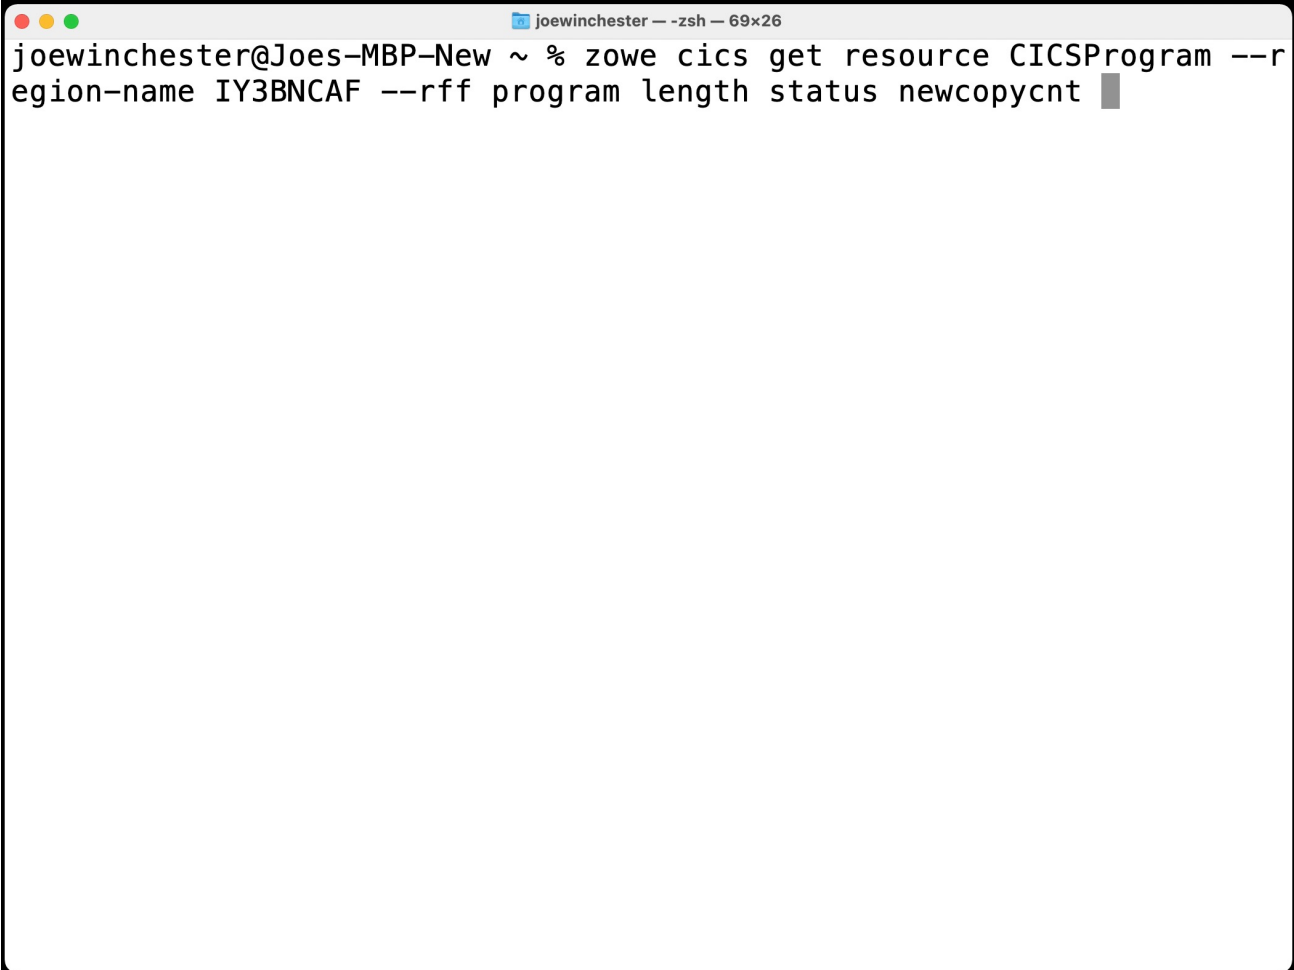

- `--response-format-filter` | `--rff` (*array*)
  - Filter (include) fields in the response. Accepts an array of field/property names to include in the output response. You can filter JSON objects properties OR table columns/fields. In addition, you can use this option in conjunction with '`--response-format-type`' to reduce the output of a command to a single field/property or a list of a single field/property.
- `--response-format-type` | `--rft` (*string*)
  - The command response output format type. Must be one of the following:
    - table: Formats output data as a table. Use this option when the output data is an array of homogeneous JSON objects. Each property of the object will become a column in the table.
    - list: Formats output data as a list of strings. Can be used on any data type (JSON objects/arrays) are stringified and a new line is added after each entry in an array.
    - object: Formats output data as a list of prettified objects (or single object). Can be used in place of "table" to change from tabular output to a list of prettified objects.
    - string: Formats output data as a string. JSON objects/arrays are stringified.
  - Allowed values: table, list, object, string
- `--response-format-header` | `--rfh` (*boolean*)
  - If "`--response-format-type table`" is specified, include the column headers in the output.

response-format-filter (--rff) field1 field2

## CICS management client interface resource names

The CICS® management client interface (CMCI) uses external resource names that map to CICSplex® SM and CICS resources.

The following tables list the CMCI external resource names and their associated CICSplex SM resource names. The resources are divided into CICS operational resources, CICS definitional resources, CICSplex SM definitional resources, and CICSplex SM nondefinitional resources.

See [CICSplex SM resource tables](#) for information about CICSplex SM resources including the CMCI methods that are valid for each resource.

### CICS operational resources

Table 1. Resource names of CICS operational resources

External resource name	CICSplex SM resource name	Description
CICSAllTaskSubpools	TSKSPOLS	CICS task storage subpools

on OMP workspace

The screenshot shows the GitHub interface for the repository `zowe/vscode-extension-for-cics`. The page title is "Explorer Squad Workspace". The navigation bar includes "Code", "Issues (24)", "Pull requests", "ZenHub", "Discussions", "Actions", "Projects", "Wiki", and "Security". A notification banner reads: "Label issues and pull requests for new contributors. Now, GitHub will help potential first-time contributors discover issues labeled with good first issue." The filters section shows "is:issue is:open" and "Labels 11". The issue list includes:

- [next] Make CICS extension pre-release available on zowe.org downloads page (vNext) #177 opened 4 days ago by JeffinSiby
- [next] Update refresh button to be consistent with ZE (enhancement) (vNext) #172 opened 7 days ago by JeffinSiby
- Error messages inconsistent with ZE error messages #163 opened 18 days ago by JeffinSiby

The screenshot shows a Slack message in the `#zowe-explorer` channel. The message is from Jeffin Siby, dated Thursday, March 3rd, 4:43 PM. The message content is:

Hi everyone, the first [Zowe Explorer for IBM CICS pre-release](#) which supports Team Configuration is now available on GitHub! Follow the [Early Access docs](#) for info on how to get started and let us know on Slack or [GitHub](#) if you run into any issues. More updates coming soon... 🎉

The message has 3 reactions (👍, 🙌, 🙏) and 2 replies. The channel name is `#zowe-explorer` and the workspace is "Getting Started with Zowe Ex...".
