

# New Ways to Analyze CICS Transaction and Statistics Data

Brent Phillips – Managing Director, Americas  
Todd Havekost – Sr. Performance Consultant  
Virtual CICS User Group – January 2023

# Getting More out of the 110 Data

- The CICS SMF data contains what is needed to:
  1. Quickly understand and solve almost any problem
    - If you can do it post-mortem, you can do it near-real-time
  2. Proactively avoid many common problems
    - If you can do it post-mortem, you can do it predictively
- Why is it so hard?
  - Volume and Complexity of the data
  - Fast access to the historical data, and flexible ways to view it
  - Lack of time from domain experts
  - Interpretation vs. Measurement
    - what are good and bad values for all the metrics/areas?
  - Silos of expertise and lack of visibility across areas
  - ...

# Modernized Analytics for 110 SMF Data

- Top capabilities to more quickly understand and avoid problems
  1. Augment the human team with machine decisions for force-multiplication
    - Health Insights to rate the most important metrics
    - Change Detection to highlight statistical anomalies
  2. Live access to near-real-time SMF metrics
    - click-to-query, click-to-compare; click-to-customize
  3. Common user interface across infrastructure areas, Shared dashboards for focus areas
- Examples shown with IntelliMagic Vision

A photograph of a lighthouse situated on a large sand dune. The lighthouse is a multi-tiered structure with a white base, a grey middle section with arched windows, and a red top section with a glass lantern room and a weather vane. In the background, a vast landscape of sand dunes stretches towards the horizon under a blue sky with scattered white clouds. A few people and a dog are visible on the dunes, providing a sense of scale.

# Analyzing CICS SMF Data

# CICS SMF Data

- CICS Statistics (SMF 110.2)
  - Data on shared resources within regions
  - Types include Transaction Manager, Storage Manager, Dispatcher, File Control
- CICS Transactions (SMF 110.1)
  - Transaction level data
  - Approx. 400 fields, including approx. 100 timing “buckets”

# Agenda

- Leveraging Assessments of Key CICS Statistics Metrics
- Analyzing CICS Statistics Metrics
- Analyzing CICS Transaction Timing Metrics
- Analyzing Other CICS Transaction Metrics
- Integrating CICS with Other Types of SMF Data

A photograph of a lighthouse situated on a large sand dune. The lighthouse is a multi-tiered structure with a white base, a grey middle section with arched windows, and a red top section with a glass lantern room and a weather vane. In the background, a vast expanse of sand dunes stretches towards the horizon under a blue sky with scattered white clouds. A few people and a dog are visible on the dunes, providing a sense of scale.

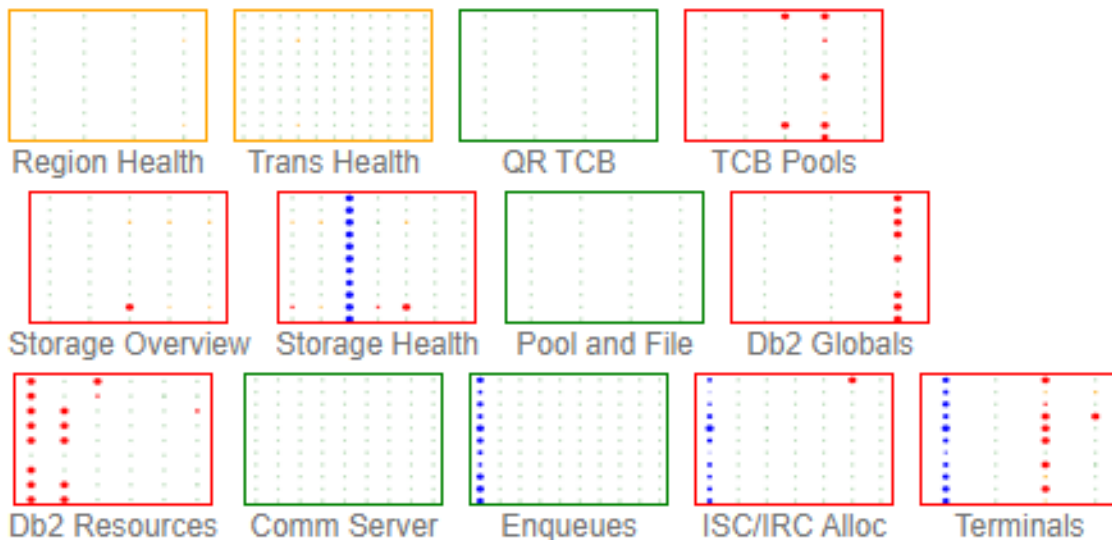

# Leveraging Assessments of Key CICS Statistics Metrics

# CICS Statistics Health Assessments

Views direct your attention to potential issues

- 70+ metrics assessed for health
- Summarized by “CICS Group”, drilldowns by region, resources

Previews report set CICS

Examples include:

- Times at MAXTASK
- Times at TCLASS Limit
- Times Short on Storage
- Storage Violations
- Max QR TCB % Busy
- Waits for VSAM File or LSR Pool Strings
- DB2ENTRY Thread Waits

A photograph of a lighthouse situated on a sand dune. The lighthouse is a multi-tiered structure with a white base, a grey middle section with arched windows, and a red top section with a glass lantern room and a weather vane. In the background, a vast sand dune landscape is visible under a blue sky with scattered clouds. A few people and a dog are seen walking on the dune. The text "Analyzing CICS Statistics Metrics" is overlaid on the right side of the image in a blue, sans-serif font.

# Analyzing CICS Statistics Metrics

A photograph of a lighthouse on a sand dune. The lighthouse is a tall, cylindrical structure with a white, textured exterior and a red top section. It has a glass-enclosed lantern room and a weather vane on top. The lighthouse is situated on a large, golden sand dune. In the background, a few people and a dog are visible on the dune, and a town is visible in the distance under a blue sky with scattered clouds.

# Analyzing CICS Transaction Timing Metrics

# Transaction Response Time Concepts

- 100 timing “buckets” grouped into high level categories
- (1) Response time = Dispatch time + Suspend time
- (2) Suspend time = Wait for first dispatch + I/O wait time + Other wait time + Uncaptured wait time
- (3) Resource Manager Interface (RMI) times
  - Suspend time and elapsed time metrics

A photograph of a lighthouse situated on a large sand dune. The lighthouse is a multi-tiered structure with a white base, a grey middle section with arched windows, and a red top section with a glass lantern room and a weather vane. In the background, a vast landscape of sand dunes stretches towards the horizon under a blue sky with scattered white clouds. A few people and a dog are visible on the dunes, providing a sense of scale.

# Analyzing Other CICS Transaction Metrics

# Other CICS Transaction Metrics

- Web Services
- Data Requests
- File Requests
- Journals
- Program Load
- Storage Usage
- Temp Storage

- BMS
- BTS
- Channel Containers
- CICS General
- Document Handling
- FEPI Requests

- RMI Requests
- Sockets
- Syncpoints
- Tasks
- Terminal Activity
- User Fields

# Integrating CICS with Other Types of SMF Data

# Integrated Perspective into CICS Performance

- 70 – CPU at system level
- 72.3 – CPU at service class level
  - WLM performance indices
  - Key transaction metrics
- 101 – Db2 Accounting view of CICS transactions
- 116 – MQ Accounting view of CICS transactions

# Integrating WLM (72.3) and CICS Transaction Data (110.1)

# Summary

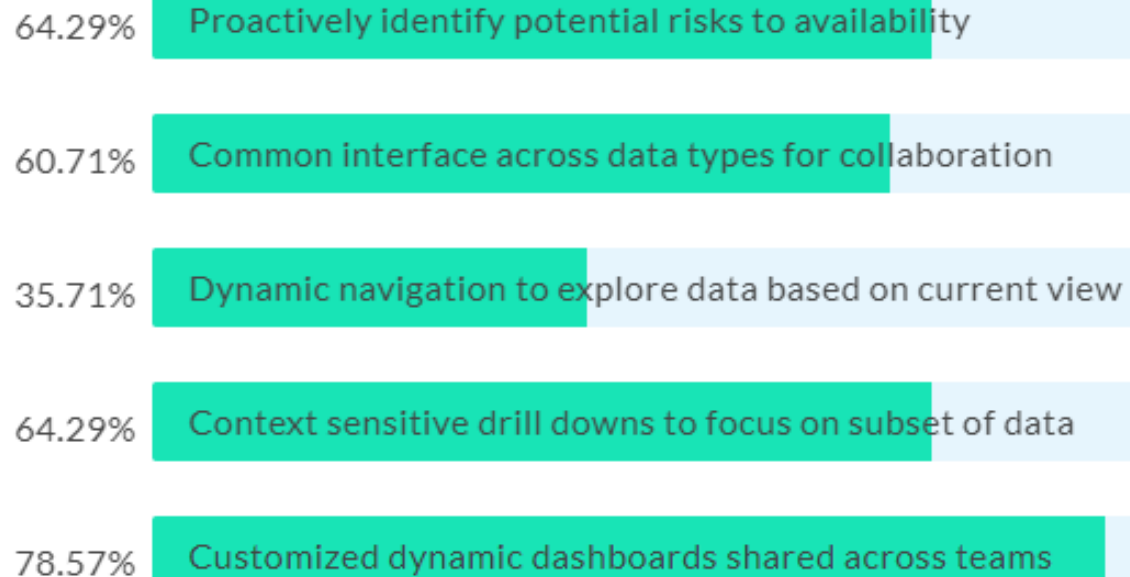

# New Ways to Analyze CICS SMF Data

- ❖ Proactive identification of potential availability and performance risks
- ❖ Common interface into data types across disciplines (instead of siloed tooling) promotes collaboration
- ❖ Dynamic navigation to explore data based on current view (instead of static reports)
- ❖ Context sensitive drill downs to quickly focus on desired subset of data (even with massive data volumes)
- ❖ Shared customized dynamic dashboards provide common views across organization

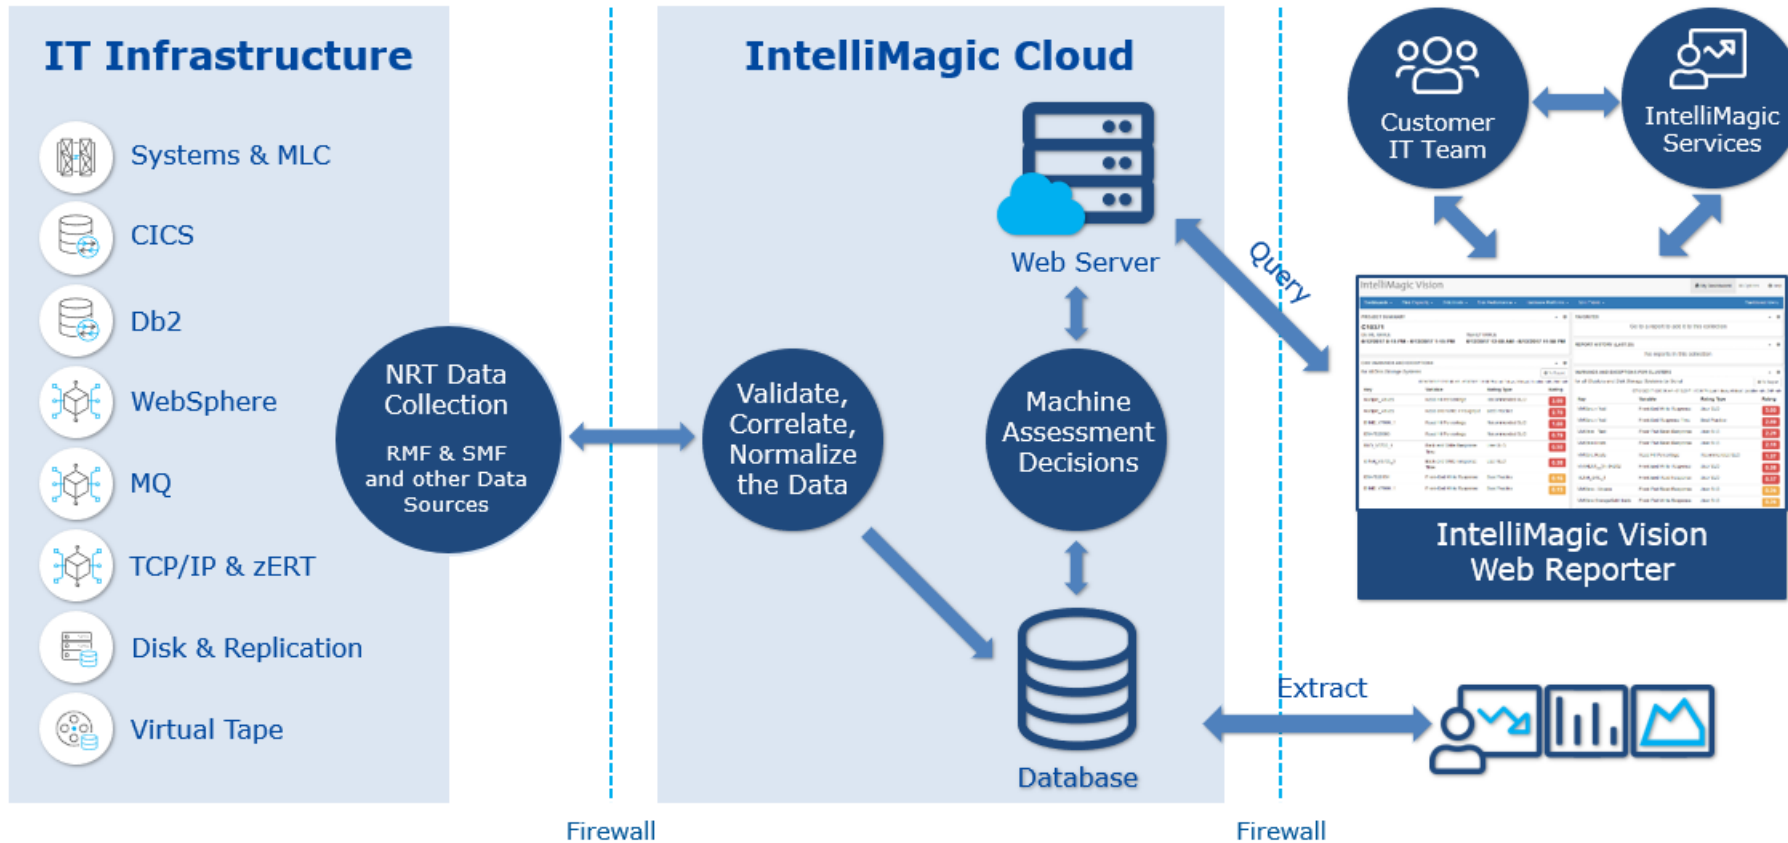

# Recent Poll Results

1 of 1. Which capabilities could enhance your current analysis of CICS SMF data? (Select all that apply)

Multiple choice with multiple answers

# Modernized SMF Analytics via Cloud Delivery

**Product Infrastructure**  
IntelliMagic-provided product infrastructure and management

**Implementation**  
Very fast implementation

**Access to Experts**  
Fractional access to deep performance experts

**Short-Term Services**  
Enables fast and cost-effective short term service engagements
